North America is the third largest continent in size. It is bordered by the Atlantic Ocean on the east and the Pacific Ocean on the west. The continent is dominated by three countries: Canada, United States and Mexico.

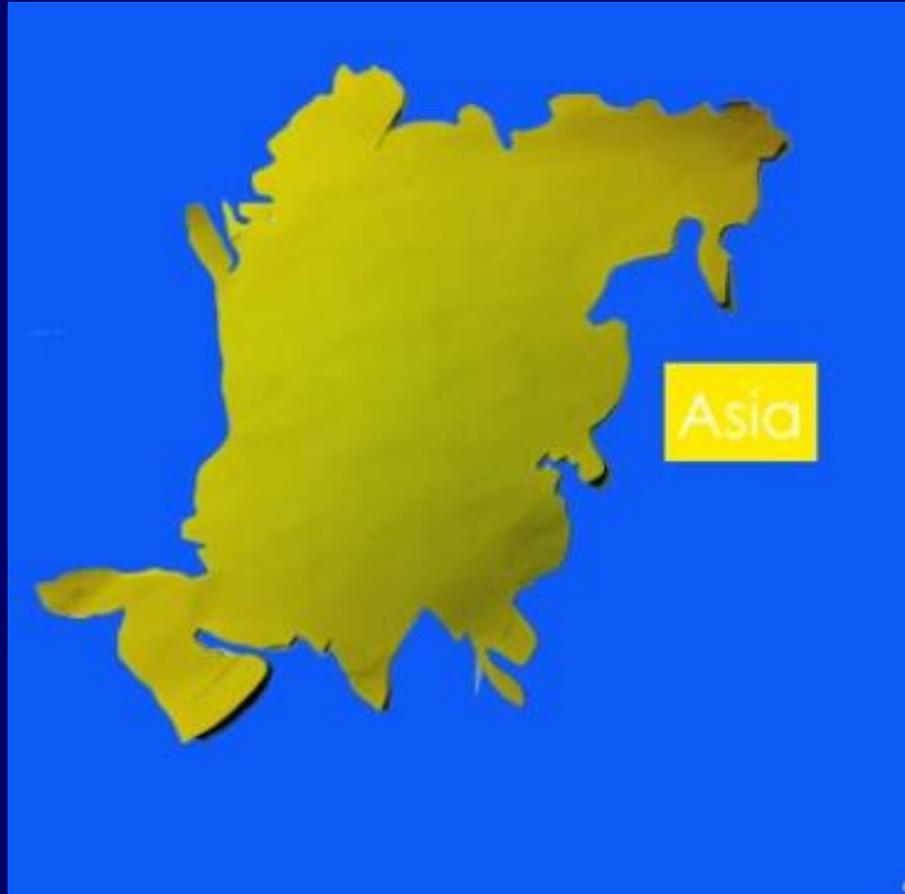

South America is the fourth largest continent in size. It is home to the world's largest rainforest, the Amazon Rainforests, Angels Falls, the world's highest waterfalls and the world's biggest lake, Lake Titicaca.

Africa, also called “Mother of Mankind”, is the 2nd largest and the 2nd most populous continent. It has the world’s largest non-polar desert, the Sahara. The equator passes through the continent making it the hottest.

Europe is named after a person in Greek mythology called Europa. It is located completely in the northern hemisphere and mainly in the eastern hemisphere. The biggest country within Europe is Russia. It is so big it also covers a large part of Asia too.

Asia is the largest continent of our planet, both in size and also when we consider the population. In Asia more than 2,300 languages are recognized. The most spoken languages is Chinese. Mount Everest the highest peak in the world is located in Asia.

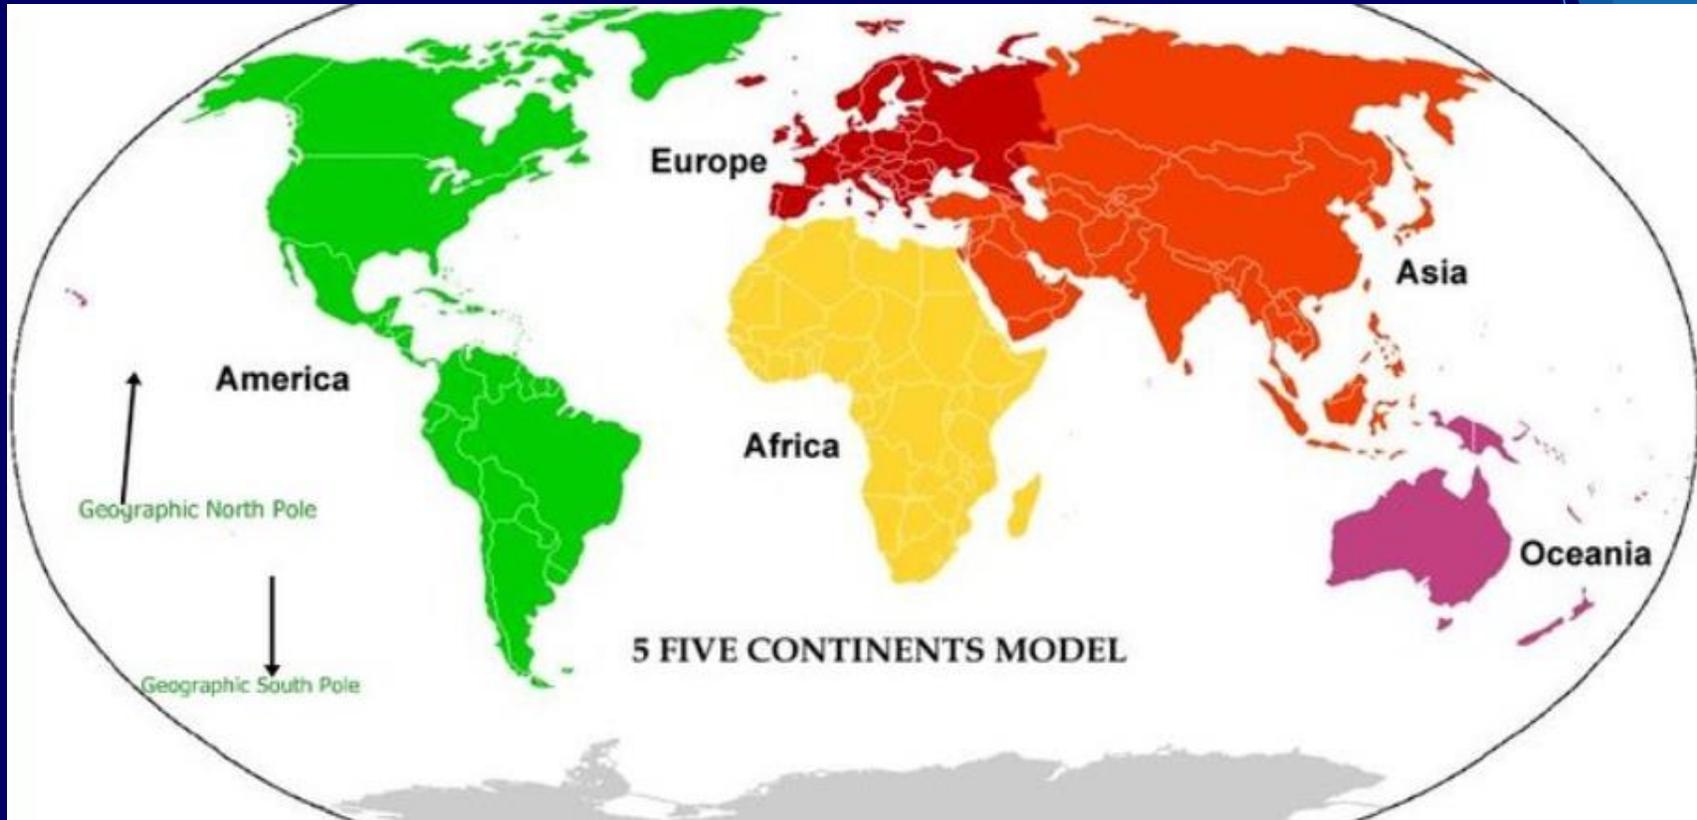

The largest island and the smallest continent in the world, Australia is sometimes called an “Island Continent”. The Australian continent is famous for kangaroos, emus and the world largest coral reef, the Great Barrier Reef.

99% of Antarctica is ice. It is the world's largest polar desert. The continent holds 60% - 90% of the world's fresh water. During winter months it nearly doubles in size due to the large amount of ice that forms along the periphery.

**Did
you
know?**

In some parts of the world, the 5 continent model is taught. This is the model used in the United Nations and in the Olympic Charter in its description of the Olympic Flag. The 5 rings represent the 5 continents.
